- Rotates 40 revolutions per minute
- Three 200 W lamps
- Approved according to Swedish air safety regulations

PRODUCT PROFILE

Exir Broadcasting produces and sells warning lights for masts and towers as demanded by current air safety regulations.

The long-flashing lights from Exir Broadcasting are manufactured in stainless steel and can withstand all climatic condition, such as heavy wind and rain, snow and ice, sand, dust and salt. The design has been tested over many years in all Teracom's masts around Sweden and has proved its operational reliability.

Exir Broadcasting's long-flashing light rotates at 40 revolutions per minute and has three 200 Watt lamps with reflectors.

The unit rotates night and day for several years and is extremely reliable. However, after 5-8 years of operation the wear on some parts may have reached a level where a breakdown is possible. That is why we recommend warning lighting is returned to us after 4 years for service maintenance. During this inspection a substitute long-flashing light will be provided.

In normal operating circumstances bulbs will have to be changed regularly. Bulbs can be obtained from Exir Broadcasting.

Exir Broadcasting's long-flashing lights have a 1-year guarantee.
